## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Specification***

The substitute specification filed 9/26/2005 has been entered because it conforms to 37 CFR 1.125(b) and (c).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 11-14, 16-18, and 20 are rejected under 35 U.S.C. 102(a) as being anticipated by Bray et al. (UK Patent Application Publication 2,377,177). Bray discloses a wound dressing (pg. 1, lines 1-2) comprising a web of gel forming fibers (pg. 1, lines 4-5) attached to a reinforcing layer (pg. 1, lines 5-6), wherein the density of the web is in a range of 25-200 grams per square meter, which has a portion that falls within Applicant's range of 5-60 grams per square meter. The gel-forming fibers comprise alginate (pg. 1, lines 6-7). The reinforced layer and the web are attached by needling (pg. 3, lines 6-7) or thermal bonding (pg. 3, lines 9-10). The reinforced layer is woven of

nonwoven fabric (pg. 1, lines 17-19). The dressing comprises an active agent that is an anti-bacterial agent (pg. 1, lines 23-24). The dressing comprises silver calcium alginate or silver calcium alginate (pg. 1, lines 12-14).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bray et al. (UK Patent Application Publication 2,377,177) in view of Sessions et al. (US Patent 6,346,653). Bray substantially discloses the claimed invention; see rejection to claim 11 above. Bray fails to disclose an adhesive means for attaching the web to the reinforcing layer. However, Sessions discloses a wound dressing (10) comprising an adhesive means (28) for attaching a first layer (30) to a second layer (32). Therefore, it would be obvious to one of ordinary skill in the art at the time of the invention to substitute Bray

Art Unit: 3772

bonding means for the adhesive means, as taught by Sessions, because the adhesive is a well known means in the art for securing layers of a wound dressing.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bray et al. (UK Patent Application Publication 2,377,177) in view of Nielsen (US Patent 6,998,509). Bray substantially discloses the claimed invention, specifically including an active ingredient within the dressing; see rejections to claims 11 and 17 above. Bray fails to disclose a pain-relieving agent incorporated in the dressing. However, Nielsen teaches a wound care device comprising a pain-relieving agent (col. 9, lines 27-31). Therefore, it would be obvious to one of ordinary skill in the art at the time of the invention to modify the active ingredient in the dressing of Bray to substitute a pain relieving agent for the active ingredient, as taught by Nielsen, in order to provide the user with the comfort of not feeling the pain from the wound under the dressing. Such a modification would have been obvious on one of ordinary skill in the art at the time of the invention was made to substitute the pain relieving agent for the antibacterial agent, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Griffiths et al. (US Patent 6,458,460).
